Acknowledgments

Although only one name appears on the cover of this thesis, it would be a mistake to conclude that this book is the product of the efforts of only one person. This thesis owes a lot to many different people. In this section, I have the opportunity and pleasure to acknowledge the efforts of others and to thank them for the positive influence they have had in determining the final form of this thesis.

First of all, I owe a great debt of gratitude to my supervisors Rineke Verbrugge and Bart Verheij. Without a doubt, your guidance and support have been instrumental in the process of writing this thesis. I have always been able to count on you for encouragement to investigate interesting topics, to present my findings, and to make contact with other researchers. Our meetings always filled me with new ideas that I was eager to pursue right away, and your constructive criticism helped me to keep improving my work and to deepen my understanding of the results.

I also want to thank the members of our social cognition research group of which I was a part. This group brought together people of different backgrounds to investigate theory of mind from a variety of angles. Our different viewpoints made sure that our meetings always had interesting and lively discussions, both on findings of our own group as well as on the research conducted by others. The social cognition group has gone through a number of different configurations, and I have learned a lot from the comments and insights provided by Burcu Arslan, Cédric Dégremont, Sujata Ghosh, Ben Meijering, Daniël van der Post, Jakub Szymanik, Elske van der Vaart, Stefan Wierda, and Rineke Verbrugge. I would especially like to thank Daniël for our particularly interesting discussions on the behavior of humans, non-human animals, and computational agents, and Sujata and Jakub for showing me up close how to organize a festive workshop.

As part of the Institute of Artificial Intelligence of the University of Groningen, I have had the chance to carry out my research in an environment that is both stimulating and relaxed. This unique environment is the result of the efforts of more people than I could possibly acknowledge here, but there are people that I want to thank for their contribution in particular. First of all, I want to thank Jort and Charlotte for sharing an office with me at one time or another, and for putting up with me. I also would like to thank Elina and Jessica, who have helped me out more times than I can remember. I really appreciate all that you have done.

I have enjoyed many relaxing lunch and coffee breaks with Ana, Aswin, Bea, Ben, Burcu, Charlotte, Chris, Faik, Gyuhee, Ioanna, Jean-Paul, Jort, Marijke, Michiel, Olarik, Sheng, and Trudy. These breaks were always a good opportunity to catch up with everyone, and I believe that just about every subject imaginable has been covered at the lunch table at some point or another. I also especially want to thank Ioanna for getting me involved in Zumba, which I still find to be a great way to get moving, and which inspired Zumba dinners with Aswin, Burcu, and Ioanna herself.

I owe a special thank you to Padma Rao Sahib, who has worked with me since before I started my Artificial Intelligence studies. Thank you for all your help, advice, and also for all the tea. I have learned a lot from you, and it has truly been a pleasure working and teaching together.

I would also like to thank the Donders Institute, and especially Iris van Rooij, Mark Blokpoel, and Ivan Toni, for their comments and insights on the Tacit Communication Game. This has helped me enormously in putting together what has now become Part 2 of this thesis.

Burcu and Charlotte, thank you for being my paranymphs. I will feel a lot better during the public defense of this thesis, knowing that there will be two very capable researchers at my side.

There is a group of friends that I have known since high school, and still meet on a regular basis to play games and catch up. Marco, Hilmar, Margreet, and Matthijs, I really enjoy our gaming birthdays, and I hope that there are many more to come.

My family has been a constant source of support to me. It is a great comfort to know that there is a place where I am always welcome and where I can feel free to be who I am. I want to thank my parents, Rosanne, Ruben, and Heleen for making that possible. And last, but definitely not least, I want to thank you, Trudy. It is hard to imagine where I would be without you. I know how difficult I can be to deal with, and I want to thank you for all your support. Thank you for everything.

- *Harmen de Weerd*
